CONSULTING

Introduction

AI That Works Where Finance Works

SensibleAI, natively built into the OneStream platform, advances enterprise performance management by empowering organizations with advanced machine learning models that analyze historical data to forecast future trends.

This brochure showcases how the SensibleAI portfolio transforms corporate performance management by redefining planning and forecasting processes, streamlining close and consolidation workflows, and delivering unparalleled accuracy in reporting and analysis.

Our OneStream and Technology Enablement practice experts are here to guide you through every step—system selection, implementation, and beyond. We design, build, operationalize, and manage the entire lifecycle of your OneStream implementation and enhancements, empowering our customers with production-ready AI solutions.

Onestream SensibleAI™ Portfolio

SensibleAI Portfolio embeds purpose-built artificial intelligence (AI) capabilities directly into critical finance processes—no data science teams, disconnected tools, or long implementation cycles needed.

Built natively within the OneStream platform, SensibleAI unifies quantitative, generative, and agentic AI across planning and forecasting, close and consolidations, and reporting and analysis.

SensibleAI is delivered within the same familiar workflows, data, and security model that OneStream's finance customers worldwide trust and use.

AI-Powered Finance Purpose-Built, Unified, and Delivered in Weeks

- **Built by Finance, for Finance:** Purpose-built AI capabilities native to the OneStream platform.
- **Unified AI—No Silos:** AI leverages the same data, security, and metadata model finance already trusts.
- **Speed to Value:** Deployed in weeks, not months, enabling customers to see value faster
- **Scalable and Extensible:** Expand use cases as needed across planning, close, reconciliation, and reporting processes.
- **Transparency and Trust:** Built-in dashboards, audit trails, and explainability for every model and prediction.

SensibleAI Solutions

Forecast	Studio	Agents
• Cost-saving efficiencies with 85%+ reduction in forecast time. • Improved decision making with 25%+ more accurate predictions. • No-code solution embedded within OneStream platform and processes.	• Anomaly detector to mitigate risk within planning and close. • Accelerated data analysis with natural language query capabilities. • Optimized system performance with diagnostic reports and prescriptive fixes.	• Autonomous agents to extract, interact, and visualize data and enterprise information assets. • Full transparency into model responses. • Customer data that remains secure, never leaving or training external models.

Forecast with Accuracy and Speed

SensibleAI Forecast enables highly accurate time-series forecasting powered by machine learning (ML), no coding or external tools required. Unlike do-it-yourself AI toolkits or standalone vendors, SensibleAI Forecast is ready to deploy today—delivering results in weeks, not months or years.

- 25%+ average forecast accuracy improvement.
- 85%+ average reduction in time to create forecasts.
- Built-in explainability dashboards and narrative summaries.

Build and Extend AI Use Cases with SensibleAI Studio

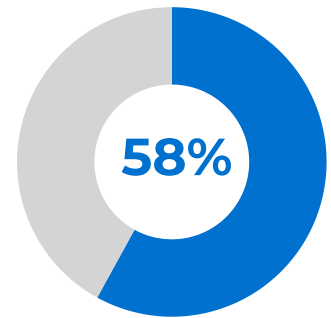

SensibleAI Studio empowers finance teams and developers with a suite of prebuilt AI algorithms, workflows, and no-code tools to rapidly scale.

- 30+ reusable plug-and-play AI routines (e.g., anomaly detection, system diagnostics, data manipulation).
- Click-to-Configure blocks to easily embed AI in workflows.
- Faster implementation and improved data quality.

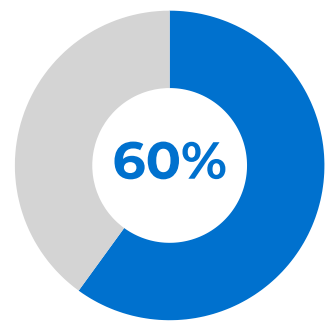

Work Smarter with AI-Powered Agents

SensibleAI Agents are financially intelligent digital team members—purpose-built to analyze, synthesize, and act on financial and operational data. Types of Agents:

- **Finance Analyst:** Explore cube data, visualize results, detect anomalies.
- **Operations Analyst:** Explore transactional and operational data.
- **Search Agent:** Instantly find and interpret content from OneStream and enterprise docs.
- **Deep Analysis Agent:** Extract, refine, aggregate, and summarize textual and image data across thousands of documents for deep insights.

of finance teams in May 2024 reported having AI in various stages of production, **more than a 50% increase from 2023 levels***

of organizations will use AI-enabled scenario planning as a **primary business partnering by 2028***
